- 30m high x 2.4 x 2.8m Lift Shaft consisting of 200 panels pinfixed to steel frame

Queensland Glass were proud to partner with John Holland Group to deliver the new Mercedes Benz Lifestyle Precinct.

The five-level glass landmark at Breakfast Creek Wharf aims to redefine the future of retail experience in it's delivery of the Mercedes Benz Lifestyle Precinct. The space is a first to market concept represented as a demonstration of LSH's vision and capability to redefine the future of customer experiences.

It combines a state-of-the-art dealership and heritage car museum with a network of retailers and brands that speak to the same audience.

The build sets the tone for contemporary design; with the facade revealing various materials, modernist architectural elements and building planes to promote visual interest and break up the horizontal and vertical nature of the structure.

Queensland Glass installed 3000m² of glass across the project; the feature being the 30m high lift shaft comprised of 200 panels pinfixed to a steel frame.
